Summary

Software Engineer on Yandex SourceCraft's AppSec platform; DevSecOps background in secret scanning, SAST and API fuzzing at production scale. Upstream contributor to Trivy, Gripe and Syft. Open to worldwide remote.

Experience

Yandex

Jun 2025 — Present

Software Engineer · Full-time · Hybrid

- Building AppSec features at [SourceCraft](#), Yandex's developer platform.
- Built the SCA pipeline end to end: SPDX/CycloneDX SBOM parsing, transitive dependency graphs, CVE enrichment.
- Shipped license compliance: license extraction from SBOMs, policy evaluation and per-repository risk scoring.
- Extended the scanner platform across SAST, secret scanning, SBOM, IaC and DAST (Semgrep, CodeQL, Trivy, Gripe, Syft, Gitleaks, Kingfisher, Checkov, ZAP) behind one SARIF ingestion layer.
- Designed the defect lifecycle: code-flow-hash dedup, a status state machine, an audit trail and inline PR comments.
- Instrumented the platform with OpenTelemetry tracing and outcome metrics driving CI and upload alerting.

Sberbank

Aug 2023 — May 2025

DevSecOps · Full-time · On-site

- Designed and implemented a secret scanning service integrated into CI/CD (~6,500 scans/week).
- Developed and launched a SAST service based on Semgrep and CodeQL.
- Designed and developed an API fuzzing tool for RESTful APIs.

[Go](#) · [Python](#) · [Groovy](#) · [Gin](#) · [FastAPI](#) · [gRPC](#) · [Kafka](#) · [PostgreSQL](#) · [Helm](#) · [Istio](#) · [Prometheus](#) · [Grafana](#)

Open Source

Merged upstream contributions to the supply-chain scanners I use daily — [Trivy](#) (37k stars), [Gripe](#) (12k), [Syft](#) (9k) — covering SARIF reporting (CVSS vectors, PURLs, fallback descriptions) and Go module path parsing.

Skills

- Languages & Frameworks** — Go, Kotlin, Python; Gin, FastAPI, Quarkus, GORM, Hibernate, SQLAlchemy, gRPC.
- Infrastructure & Observability** — Kubernetes, Helm, OpenShift, Docker, Istio, Kafka, PostgreSQL, MongoDB, S3, Redis; Prometheus, Grafana, Tempo.
- Security** — SAST (Semgrep, CodeQL, Checkmarx), secret scanning (Gitleaks, DeepSecrets, Kingfisher), SCA & SBOM (Trivy, Gripe, Syft, SPDX, CycloneDX), IaC (Checkov, KICS), DAST (ZAP), API fuzzing.
- Architecture** — DDD, TDD, SOLID, ACID, BASE.

Projects

vercraft-go

2026

Language-agnostic CLI that derives a SemVer version from git history and `release/` branches. Go port of [orchestr7/vercraft](#).

[Go](#) · [git](#) · [SemVer](#) · [CI/CD](#)

[source](#)

Gradle License Compliance Plugin

2026

Gradle plugin that scans dependencies, reads licenses from POM files and verifies them against a policy. Published to Maven Central.

[Kotlin](#) · [Gradle](#) · [Maven Central](#)

[source](#)

Kotlin vs Golang — benchmark

2026

CRUD performance comparison of Quarkus (Kotlin) vs Gin (Go) with PostgreSQL, Prometheus and Grafana.

[Kotlin](#) · [Go](#) · [Quarkus](#) · [Gin](#) · [PostgreSQL](#) · [Prometheus](#) · [Grafana](#)

[source](#)

ECIES Educational Application

2024

Interactive tool for learning the Elliptic Curve Integrated Encryption Scheme.

[Go](#) · [Gin](#) · [Fyne](#) · [Swagger](#) · [Docker](#)

[source](#)

Secret Scanning Engine

2023

Engine for searching secrets and credentials in source code repositories.

[Python](#) · [FastAPI](#) · [Prometheus](#) · [Docker](#)

[source](#)

Retouching Module

2022

Implementation of the FabSoftening paper — face beautification via dynamic skin smoothing. Python module written in C++.

[C++](#) · [OpenCV](#) · [pybind11](#) · [CMake](#)
