Summary

Software Engineer on Yandex SourceCraft's AppSec platform; DevSecOps background in secret scanning, SAST and API fuzzing at production scale. Upstream contributor to Trivy, Grype and Syft. Open to worldwide remote.

Experience

Yandex

Jun 2025 — Present

Software Engineer · Full-time · Hybrid

- Building AppSec features at [SourceCraft](#), Yandex's developer platform.
- Built the SCA pipeline end to end — SPDX and CycloneDX SBOM parsing, transitive dependency graphs and CVE enrichment per repository.
- Shipped license compliance: license extraction from SBOMs, policy evaluation and per-repository risk scoring.
- Extended the scanner platform across SAST, secret scanning, SBOM, IaC and DAST (Semgrep, CodeQL, Trivy, Grype, Syft, Gitleaks, Kingfisher, Checkov, ZAP) behind one SARIF ingestion layer.
- Designed the defect lifecycle: code-flow-hash deduplication, a status state machine and an activity audit trail, with findings delivered as inline pull request comments.
- Instrumented the platform with OpenTelemetry tracing and outcome metrics driving alerting on CI triggers, report uploads and scheduled jobs.

Kotlin · Go · Quarkus · Vert.x · gRPC · Hibernate · Liquibase · PostgreSQL · S3 · OpenTelemetry · Helm

Sberbank

Aug 2023 — May 2025

DevSecOps · Full-time · On-site

- Designed and implemented a secret scanning service integrated into CI/CD (~6,500 scans/week).
- Developed and launched a SAST service based on Semgrep and CodeQL.
- Designed and developed an API fuzzing tool for RESTful APIs.

Go · Python · Groovy · Gin · FastAPI · gRPC · Kafka · PostgreSQL · Helm · Istio · Prometheus · Grafana

Open Source

Merged upstream contributions to the supply-chain scanners I use daily — [Trivy](#) (37k stars), [Grype](#) (12k), [Syft](#) (9k) — covering SARIF reporting (CVSS vectors, PURLs, fallback descriptions) and Go module path parsing.

Skills

- **Languages & Frameworks** — Go, Kotlin, Python; Gin, FastAPI, Quarkus, GORM, Hibernate, SQLAlchemy, gRPC.
- **Infrastructure & Observability** — Kubernetes, Helm, OpenShift, Docker, Istio, Kafka, PostgreSQL, MongoDB, S3, Redis; Prometheus, Grafana, Tempo.
- **Security** — SAST (Semgrep, CodeQL, Checkmarx), secret scanning (Gitleaks, DeepSecrets, Kingfisher), SCA & SBOM (Trivy, Grype, Syft, SPDX, CycloneDX), IaC (Checkov, KICS), DAST (ZAP), API fuzzing.
- **Architecture** — DDD, TDD, SOLID, ACID, BASE.

Projects

vercraft-go

2026

Language-agnostic CLI that derives a SemVer version from git history and `release/` branches — no tag zoo, no build plugin. Go port of [orchestr7/vercraft](#). [source](#)

Go · git · SemVer · CI/CD

Gradle License Compliance Plugin

2026

Gradle plugin that scans dependencies, reads licenses from POM files and verifies them against a policy. Published to Maven Central. [source](#)

Kotlin · Gradle · Maven Central

Kotlin vs Golang — benchmark

2026

CRUD performance comparison of Quarkus (Kotlin) vs Gin (Go) with PostgreSQL, Prometheus and Grafana. [source](#)

ECIES Educational Application

2024

Interactive tool for learning the Elliptic Curve Integrated Encryption Scheme. [source](#)

Secret Scanning Engine

2023

Engine for searching secrets and credentials in source code repositories. [source](#)

Retouching Module

2022

Implementation of the FabSoften paper — face beautification via dynamic skin smoothing. Python module written in C++. [source](#)

Education

MIREA — Russian Technological University

Graduated 2026

Information Security (Specialist)
